PROFILE

Hello my name is Meletis and I have been working as a Web Developer for more than 3 years. Whilst, I have studied Economics I began to study Web development as a hobby through boks and tutorials . I decided that web development and particuarly programming is what I have ever wanted to do. At first, I started developing some websites in Wordpress as a freelancer and then I started studying php deeper. Ths first framework I dived into was Codeigniter and then switched to Laravel. Before, Laravel I have been experimented a little withe Ruby and Rails and Node with Express. Nowadays, I have been working as a Magento Developer and I have dived into Symfony and Zend Framework. Surely, though I can say that I am not a fan of Knockout Js, in favour of VueJS and React.

EDUCATION

ECONOMICS/BC
Univercity of Piraeus
2004 - 2013

WEB DESIGN/DVEVELOPMENT/DIPLOMA
SAE institute, Athens
2017-2109

EXPERIENCE

PHP DEVELOPER - MAGENTO

Elegento / Alimos / 2018 - present

Currently, I am working as a Magento Developer in Elegento. Our daily workflow includes developing custom extensions for both Magento and Magento 2. Mostly, I use PHP and Sumfony and Zend Framework to fullfil my daily tasks. However, a lot of tasks in frond end are required, so my daily routine also includes a lot of HTML, CSS and Javascript. Magento uses Protoype JS for 1 version and Knockout JS for 2 version. Our development enviroment is in Docker so some tasks also require some Linux and Docker knowledge

PHP DEVELOPER

TGN solutions / Athens / 2017 - 2018

In this positions my daily workflow included custom PHP scripts used for Data Mining and Crawling. Also, a lot of MySQL queries required to be written from scratch as all scripts ran from console, so a lot of Linux Amdinistrations tasks required as well. For client side the panel was developed in PHP and VueJs and some Highcharts visualization.

EXTRA

As I mentioned, there was a transition in my career, and I think, while at first it did not seem to be an easy choice, it was the best one I have ever made. I love programming and web development, as you can feel developing yourself through the process. I love the opportunity to learn new things constantly and learning writting cleaner and shorter code. I will always try to improve my current skills and develop new. PS. I think that I have not mentioned GIT but I am using GIT for more than 3 years, so I think it is obligatory knowledge. Also I am familiar with GIT flow and SCRUM management but I have never used them in work.

LANGUAGES

- PHP (OOP)
- MYSQL
